Subject: Re: Possum Point Metals Cleaning Ponds

Hi

We had already discussed this and I agree that closing them is a good idea.

We can talk more when I get back

Christine,

I understand that there is some discussion about cleaning the Possum metal cleaning ponds and using them as retention basins for the treated water from the ash dewatering, prior to discharge. I think this is a great idea. Either as part of this evaluation or in addition, the impoundments around these ponds have now been determined to need to be registered with DCR as a registered dam (height and volume).

I would like to consider removing these ponds totally. The station is OK with not having them. If they can serve as part of the water treatment system and then be destroyed/contoured into the E pond final grading that would be great.

Give some thought to this and let me know what you think.....after vacation!!!
